

AQUA COULEUR – USER GUIDE

Aqua Couleur is a temporary water colourant; it does not affect the balance, transparency or quality of your pool water. It is totally hypoallergenic and will not cause ill health if accidentally swallowed in its diluted form. This product has been vigorously tested in collaboration with the pharmaceutical department of the French National Research Centre.

Preparation of pool for colouring

Before using Aqua Couleur it is vital to reduce your chlorine/bromine levels to below 1ppm, this level must be consistent throughout the whole of the pool circulation system.

1. Calculate your pool turnaround.
2. Turn off your chlorination system or make controller set point below 1ppm.
3. If desired add the necessary level of Premio to speed the reduction of chlorine/bromine. (leave for at least two hours to allow to work)
4. Allow for complete turnaround time to expire and ensure that the control system is measuring below 1ppm, and **THAT ALL WATER** in the pool system is measuring below 1ppm. If any pockets of water have a residual over =>1ppm then colour will quickly dissipate.

Colouring your pool

To colour your pool add the relevant quantity of aqua couleur through a skimmer whilst leaving the filtration system running, colour should spread quickly and last for between 6 - 12 hours.

It is important to colour your pool with the correct amount of product, below is a table to guide you although please note that there are variations in treatment depending on the colour used due to pigmentation differences. Please use this table as a guide only.

Cubic Meters	Product Volume
0.75 m ³	15ml
1.5 m ³	30ml
50/70 m ³	180ml
150/170m ³	528ml
250/270m ³	859ml
350/370m ³	1188ml
450/470m ³	1518ml
550/570m ³	1848ml

Removing the colour in your pool

Colour will fade with time, however to speed up the removal just restart your chlorination system and colour will quickly dissipate, returning your pool to its original state.

ALWAYS READ THE MANUFACTURES INSTRUCTIONS
