# AQUA couleur™

A safe and unique process of temporary water dye

The magic of coloration  
for the pleasure of the eyes  
and the swim.

To celebrate an event  
and to surprise your guests.

## A world innovation

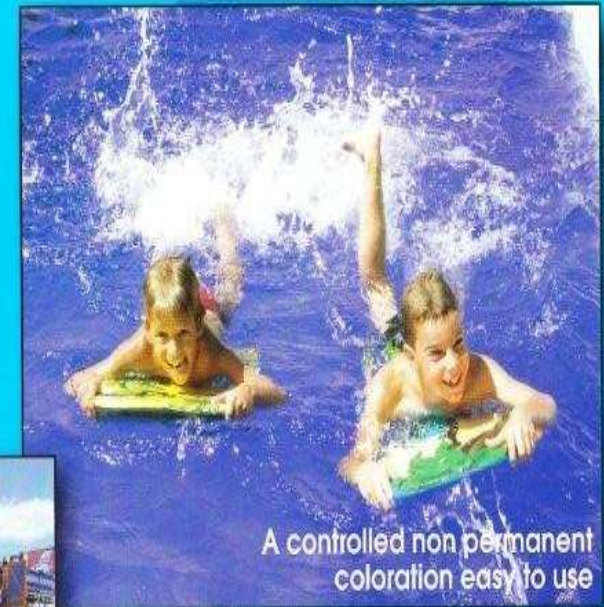

Colored water remains fully  
transparent.

No oil spreading.

No clothes staining.

A safe product developed by  
dermatologists in collaboration  
with the CNRS.

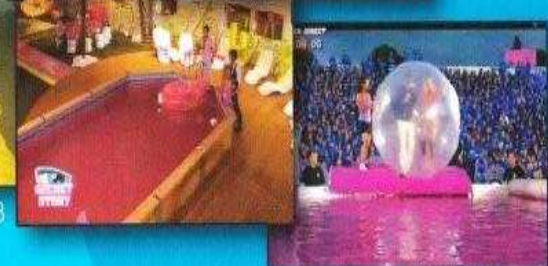

In accordance with Public Bath  
Regulations.

A controlled non permanent  
coloration easy to use

Intervilles and Secret Story 2008

Multiple use :

- Private swimming pools
- Public swimming pools
- Hydroclivity test
- Aquariums
- Fountains
- Spas

# Private swimming pools

The AQUAcolorants™ are appropriate for any kind of filtration system. A range of six colors (does not stain)!

-  Mango
-  Deep Ocean
-  Lagoon
-  Tourquoise
-  Fuchsia
-  Lavender

AQUAcouleur™ has no risk for the children.  
A 180 ml bottle can colour up  
to 100 m³ volume of water.

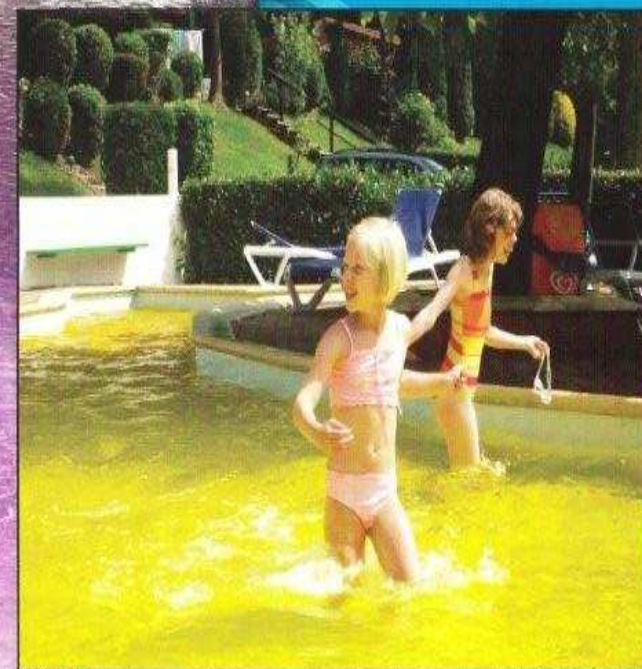

A user's guide on the back of the bottle  
will help you to achieve the right coloring.

The average life of our AQUAcolorants™ lasts two hours  
with a chlorine rate under to 2 ppm.

In order to increase the durability of coloration  
and to extend this visual pleasure for longer,  
we recommend you the use of our chlorine reducer  
AQUAcouleur™ Premio.

**AQUAcouleur™ Premio reduces  
the chlorine/bromine rate  
almost immediately.**

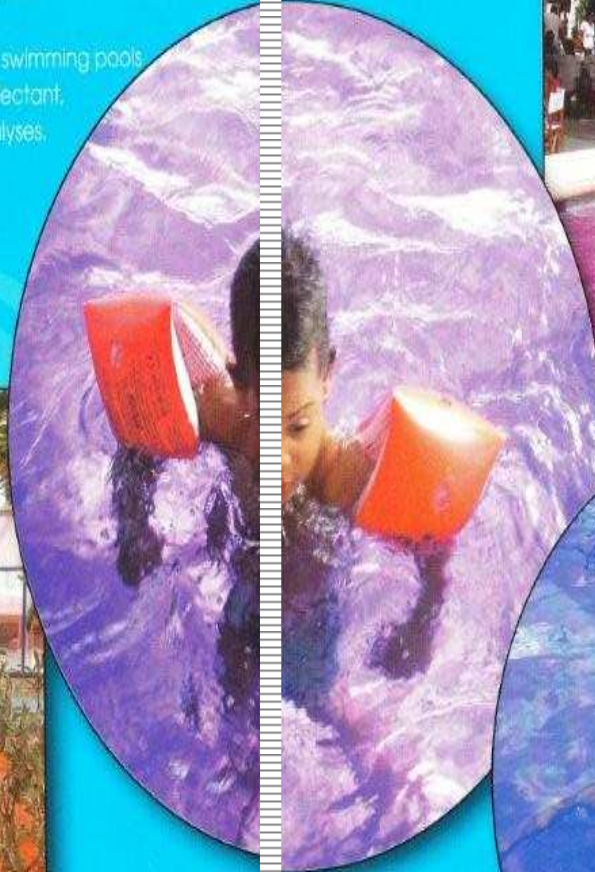

# Public baths

With regards to the increasing interest shown by aquatic parks, campings, balnéothérapie centers, we have developed specific advice for public baths subject to Public Health regulation.

Our meetings with the controller authority for the Hygiene and Safety of public swimming pools have demonstrated that AQUAcouleur™ has no incidence on the rate of disinfectant, on the pH and the transparency of the water, assuring a normal reading of analyses.

A light concentration of our AQUAcolorants allows an extremely intense coloration while water remains perfectly transparent.

Halloween animation

The use of our AQUAcolorants™ has no risk for swimmers, does not stain, causes no eye irritation and no possibility of intoxication by ingestion.

# Hidrolicity test

The ease of implementation of coloring and its fading power in some hours makes AQUAcouleur™ a reliable and economic process to realize hydrolicity tests.

It's an environmentally friendly procedure as it is not necessary to empty the swimming pool.

Evidence of a badly treated area

# Fountains

Give your fountains a touch of colour.  
AQUAcouleur™ is adapted to jet fountains as well as waterfalls.

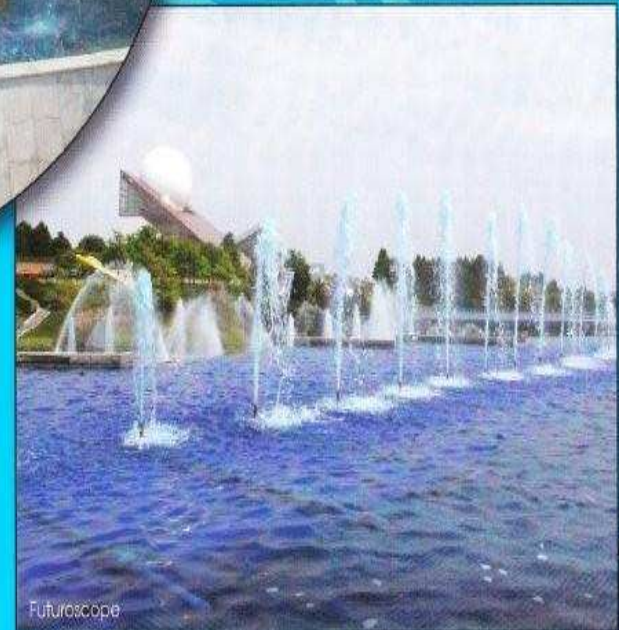

Jet fountain - Toulouse

Fountain Egypt
